Handbook of Patient Care in Cardiac Surgery

This book is geared toward cardiologists, trainees, and housestaff -- anyone who rotates or practices in the CCU--who must grasp the subtleties when treating patients in a cardiac care unit. It is organized in a way to

help you understand the simplified pathophysiology of the disease, the diagnosis modalities, the initial critical care management in the CCU, the clinical care in a step down unit and plan for discharge therapy. Dr. Herzog has developed unified pathways for the management of patients presenting with acute chest pain or its equivalent, acute heart failure, atrial fibrillation and flutter, syncope, cardiac arrest, hypertension and hyperglycemia. Algorithms and pathways for management are provided in each chapter for easy implementation in any health care system. In addition, because specialized units are frightening to the patients and their families, there is a section in each chapter on what the patient and family need to know, that encompasses a capsulated explanation of the condition and treatment management. A companion website accompanies the text that includes fully searchable text and patient information.

Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.
